From North Holland : Global International Economic Models: Selected Papers from an IIASA Conference (Contributions to Economic Analysis) before purchasing it in order to gage whether or not it would be worth my time, and all praised Global International Economic Models: Selected Papers from an IIASA Conference (Contributions to Economic Analysis):

This volume surveys the state-of-the-art of global international modeling. All 15 models included in the survey feature national or regional disaggregation of the world economy and interdependencies among the various nations and regions. A few are constructed for short-term forecasting, but the primary focus is on long-run models and applications. Macroeconomic, input-output, general equilibrium, trade and exchange rate, and several hybrid models are included. A cross-sectional analysis by the editor compares the structures, linkage mechanisms, methodologies and applications of the various models and concludes with some observations on prospective research trends.
