From Cambridge University Press : Globalisation, Regionalism and Economic Interdependence before purchasing it in order to gauge whether or not it would be worth my time, and all praised Globalisation, Regionalism and Economic Interdependence:

How has increasing economic integration at regional and global level affected the functioning of the global economy? What are the consequences of globalisation and regionalism for world trade, production processes and domestic economies? What kind of economic adjustments do these phenomena imply in terms of factor mobility and relative

costs? Globalisation, Regionalism and Economic Interdependence answers these and other questions by exploring the relationship between globalisation and regionalism from both academic and policy-making perspectives. It assesses the extent to which increased global and regional integration has changed the functioning of the world economy and analyses the implications for global trade, relocation of production, structural changes and the international transmission of shocks. With contributions from both academics and professionals, this book is an invaluable guide to the increasingly important effects of the interaction between globalisation and various different forms of regional integration.

About the AuthorFilippo di Mauro is Head of the External Developments Division at the European Central Bank in Frankfurt. His first book was *The External Dimension of the Euro Area* (Cambridge, 2007), co-edited with Robert Anderton. Stephane Dees is Principal Economist in the External Developments Division at the European Central Bank in Frankfurt. Warwick J. McKibbin is Professor of International Economics and Executive Director of the Centre for Applied Macroeconomic Analysis at the Australian National University, Canberra.
