Anthony D'Costa : The Global Restructuring of the Steel Industry: Innovations, Institutions and Industrial Change (Routledge Studies in International Business and the World Economy) before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Global Restructuring of the Steel Industry: Innovations, Institutions and Industrial Change (Routledge Studies in International Business and the World Economy):

2 of 3 people found the following review helpful. Restructuring Steel Industry - Mystry and the Miths solved:By K.R.KrishnakumarThis book gives a lucid explanation of the steps how to restructure steel industry. Language used is user friendly. Executives and Senior Executives who are involved in restructuring activities must buy this book at

once, and start following the steps explained. Author seems to have the hang of actual activities going on in the shop floor as well as in the Corporate Offices. Kudos to the Author and Good Reading to those who are going to buy this book.

Drawing upon case studies of the steel industry in the US, Japan, South Korea, Brazil and India, this book explains how and why the steel industry has shifted from advanced capitalist countries to late industrializing countries. Anthony P. D'Costa examines the relationship between industrial change and institutional responses to technological diffusion. He reveals the governments' and firms' differing responses to innovations lead to an uneven diffusion of technology and industrial reorganization. Moreover, when it becomes clear that existing institutional arrangements no longer serve the industry well, new arrangements are created which allow for innovative behaviour. Often this has created opportunities for technological 'leapfrogging' and the emergence of new technologies in unexpected places.

'The book's clear structure and writing style make it a pleasure to read. It is a detailed account of the global shift of the steel industry and therefore is useful to economic geographers and regional scientists interested in situating their research on steel industry regions in a broader context.' - *Regional Studies*, Vol. 37.4, 2003, Robert Hassink, University of Bonn
